## Overview

Following a competitive tendering process, Carmelcrest were selected to construct a double storey extension at the St Agnes Primary School in North London, to provide much needed additional classroom space.

The scheme was a traditional pitched roof build with brick exterior and beam and block flooring throughout. Internally, Carmelcrest designed & installed the Mechanical & Electrical fixtures alongside the usual internal fixtures such as flooring, wall partitions, fire doors and glazing.

## Key Aspects

- Works undertaken while the school was occupied. Segregation of works were in place.
- DBS checked workforce
- ID badges and PPE worn at all times.
- Constructed during Covid-19, safe working and social distancing measures in place
